45 Days Summer Training Program
Subject – Data Science with AIML

Topic – Mini Projects

Project 1: Password Strength Checker

Objective: Develop a Python program that evaluates the strength of a user's password.

Requirements:

- Accept password input from the user.
- Check password length.
- Verify the presence of:
  - Uppercase letters (A-Z)
  - Lowercase letters (a-z)
  - Numbers (0-9)
  - Special characters (@, #, $, %, &, etc.)
- Categorize the password as:
  - Weak
  - Medium
  - Strong
- Display the password strength along with appropriate feedback.

Bonus Features:

- Display missing password requirements.
- Prevent common passwords (e.g., 123456, password).
- Suggest improvements for weak passwords.
- Generate a strong password recommendation.

Project 2: To-Do List Application

Objective: Develop a menu-driven Python application to manage daily tasks efficiently.

Requirements

- Add new tasks.
- View all tasks.
- Remove/Delete tasks.

- Create a menu-driven interface.
- Allow the user to perform multiple operations until choosing Exit.

Bonus Features:

- Mark tasks as Completed/Pending.
- Search for a task.
- Assign task priorities (High, Medium, Low).
- Store tasks in a text file for future use.
- Display task statistics (Total, Completed, Pending).

Note: These Projects are meant strictly for your own learning and practice. Students are advised **not to copy answers from any website or online platform**.
